DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species:

Group I: Embodiment 1 (Figs. 3-5)

Group II: Embodiment 2 (Figs. 6-7)

Group III: Embodiment 3 (Figs. 8-14)

Group IV: Embodiment 4 (Figs. 16 and 17)

The species are independent or distinct because Group I discloses a method for achieving a well-adjusted white balance and broad dynamic range by simultaneously capturing high output image data and low output image data, combining the high and low output image data, and multiplying the combined image data by a total gain. Diversely, Group II teaches such a method by sequentially capturing high sensitivity image data and low sensitivity image data (by varying shutter speeds), wherein the white balance level of the low sensitivity image data is adjusted by the gain value of the high sensitivity image data. Group III, on the other hand, discloses such a method wherein a high sensitivity image and low sensitivity image are simultaneously captured, but the necessity of combining of the images is determined by the luminance level of the image capture environment. And finally, Group IV teaches such a method by simultaneously capturing high sensitivity images and low sensitivity images, wherein high sensitivity pixels and low sensitivity pixels are separately gamma corrected and then combined to aid in achieving a well-adjusted white balance and broad dynamic range. As illustrated, each group above represents a patentably distinct species of the invention and therefore each group requires a substantially divergent search strategy.

Art Unit: 2622

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
